Securing connections between people, applications, and networks™

Secure Computing Corporation—over 20 years of security expertise

Secure Computing® has been solving the most difficult network and application security challenges for over 20 years. With these award-winning solutions, we help our customers create trusted environments both inside and outside of their organizations.

Sidewinder G2 Security Appliance—all-in-one network and application protection

Enterprise network security is continuously at risk with threats that increase daily in frequency and complexity. The multi-functional Sidewinder G2™ Security Appliance from Secure Computing protects your organization from many of these threats, and keeps your valued network and application resources safe and available for the proper users to access. The Sidewinder G2 system consolidates the widest variety of security functions available in one system, tightly integrated in the industry's most trusted operating system, SecureOS®, which has never been compromised. Moreover, Sidewinder G2 delivers central, easy management for IT professionals, thereby greatly reducing the number of security systems you must buy, deploy, learn, administer, update, and depend upon for your perimeter protection.

Sidewinder G2 includes the strongest firewall in the world, and it delivers unprecedented application intrusion prevention. Loaded with **Application Defenses™**, the system includes anti-spam and anti-virus engines; protocol anomaly protection; a secure e-mail, Web, and DNS gateway; IPSec VPN; intrusion detection with automated response; outbound Web access filtering; SSL termination, and clientless VPN access.

Sidewinder G2 scales from a single system deployment, to a five-system cluster, to hundreds of distributed systems managed centrally with its complementary **Sidewinder G2™ Enterprise Manager** system, which delivers single-point policy management and a simple Power-It-On!™ deployment. Supporting gigabit throughput rates and millions of concurrent connections, Sidewinder G2 offers the best price/performance and strongest Application Defenses protection available today.

SmartFilter products—successfully monitor and manage outbound Web access

Many organizations realize that unchecked access to Web content can cause security risks, legal liability, loss of productivity, and drains on network bandwidth. SmartFilter® products enable organizations to understand, and monitor their Internet use, while taking effective steps to provide appropriate control over outbound Web access. Secure Computing's filtering solutions include:

- **SmartFilter®**: used by one out of every five Fortune 500 companies to safeguard work environments from offensive content, limit legal liability, and protect against malicious code that can enter networks when employees use the Internet.
- **Bess®**: the #1 choice for K-12 schools to cost-effectively protect students from inappropriate or illegal Internet content. CIPA compliant and easy to use, Bess delivers the only true education-centric filtering solution in the business.

At the heart of these filtering products is a database of over six million Web sites organized into 62 categories for granular and flexible policy enforcement options. This database is carefully screened and continually updated by the industry's most experienced team of analysts, reviewing Web sites in over 60 languages worldwide.

Powerful reporting capabilities provide real-time monitoring, and drill-down capabilities, allowing an organization to understand exactly how the Web is being used, and what types of sites are being accessed by groups or individuals.

"After years of considering simple access control 'good enough,' many security managers are demanding granular and powerful application-layer controls..."

Joel Snyder
Information Security Magazine
March 2004

"We are very happy with the accuracy of URLs, categorization, and extensive reporting."

Barbara Pettygrove
Information Security Analyst
Blue Cross Blue Shield of Kansas

SmartFilter products are easy to install and manage, and provide the widest range of deployment options to fit any network environment. Many SmartFilter configurations run On-Box™ with the most popular proxy servers, caching appliances, and firewalls, providing unrivaled speed, reliability, and scalability.

SafeWord strong authentication—verify who's accessing your networks

Passwords are one of the weakest elements in every network, and can be easily hacked, stolen, or guessed. SafeWord® products eliminate these password risks for thousands of organizations worldwide every day. SafeWord tokens generate new passcodes with every user login, ensuring that only trusted users are accessing your networks.

The following SafeWord products are tightly integrated with Active Directory, install in minutes on your existing hardware, and protect popular remote access applications:

- **SafeWord® RemoteAccess™** protects all VPNs and RADIUS devices, Citrix, and Outlook Web Access connections.
- **SafeWord® for Check Point** protects Check Point VPNs and systems, interoperates with the Check Point user interface, and is OPSEC and SmartOPSEC certified.
- **SafeWord® for Citrix® MetaFrame®** is created for Citrix MetaFrame systems with web interface or MetaFrame Secure Access Manager.
- **SafeWord® for Nortel Networks** protects Nortel Networks devices, and works with Nortel Networks VPN Gateway 3050 and other Nortel Networks VPNs.

In addition, SafeWord® PremierAccess™ is a complete enterprise-level authentication and access control system. It protects and controls access to Web, VPN, and many other network applications, and supports a wide range of authenticators from tokens to smart cards to biometrics. PremierAccess includes integrated PKI user authentication and role-based authorization, making it the most complete authentication system on the market.

For more about SafeWord products, visit www.safeword.com

"SafeWord won because of its combination of solid token design, effective management and easy integration with Microsoft AD."

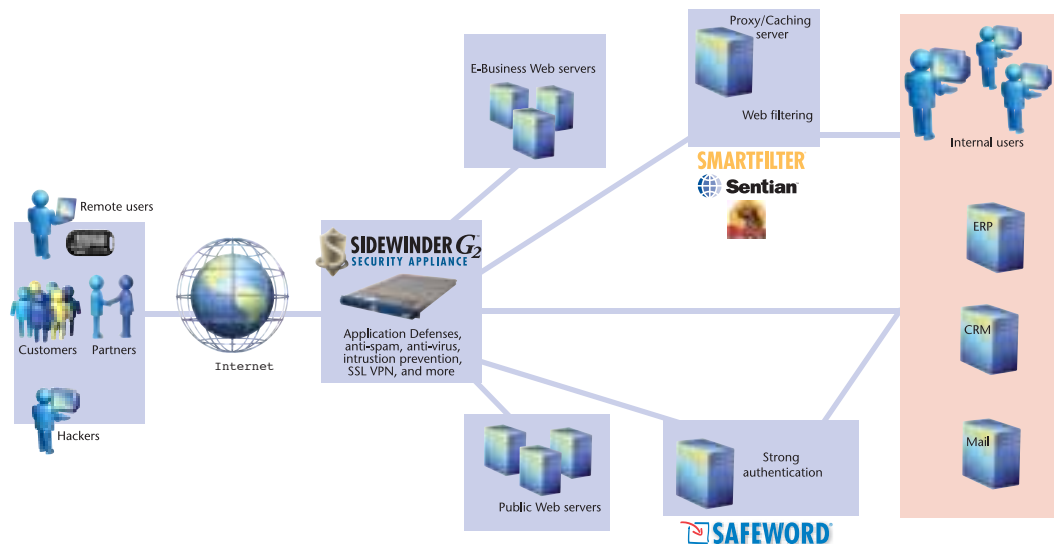

Curtis Franklin, Jr. Network Computing Magazine May 7, 2004

Receive superior network and security services

Secure Computing provides its award-winning service program, offering a full range of integration services and training to assist you through a seamless implementation of our products. For more information, visit www.securecomputing.com/goto/support.

"Whether it's a simple question like how to enable something or I need detailed instructions concerning an upgrade or patch installation, whenever I call I always get a very knowledgeable person who quickly sees my problem through to resolution."
